INTRODUCING

smart^{home}
working[®]

orangebox

Early research is indicating that the upsides many of us are experiencing from working at home are likely to lead to home working becoming a bigger part of our

work life after

the Covid-19 pandemic has abated.

The need for

smart^home working[®]

has migrated rapidly from sizable enquiries pre lockdown to today, where we are projecting serious high levels of demand.

Our clients are
revaluating
their home working approach

from the short term towards a valid
longer-term, more permanent option

They are also beginning to project long-term real estate cost benefits and suggesting their spaces may become more agile and social collaborative spaces.

with employees splitting time between the home and office, based on shift patterns.

AWARD WINNING

workplace adjustment service

microlink[®]
people focused solutions

which required employees
to be supported at home
with
serious
compliant equipment,
as part of a new norm
of working.

An ill-considered approach is not an option.

Our client's cannot afford to take a casual approach to this and will quickly need well-packaged and rigorous solutions, to support a variety of work functions and specific ergonomic needs.

We've engaged

with key clients,
partners and consultants

to ensure we create a responsible and
scalable home working proposition

that we
can deliver
directly to an
employee's **home** address

We have responded to the crisis, identified solutions and sourced effective ergonomic desktop accessories. Rapid demand has led to shortages and extended lead times for these products.

Our response has been to gear up investment to achieve scale, and continuity of supply for our selected products.

INVESTMENT

from
our warehouse
to
your house

We've invested in a new business unit to enable Microlink to offer a variety of home working packages in a 3-day turnaround.

Delivered to the employees door with no or minimal installation (in most cases).

Which is allowing our client's to offer their staff choice, while controlling costs. Our clients can choose bespoke packages tailored to their specific needs and requirements.

What is Smart **Home** Working?

Early research is indicating that the upsides many of us are experiencing from working at home are likely to lead to homeworking becoming a bigger part of our work life after the Covid-19 pandemic has abated.

In the wake of the Coronavirus, it seemed likely that working from home would be a passing storm, but it has very quickly transformed into 'climate change'. Early research is indicating that the upsides (and yes, there are still a few downsides) many of us are experiencing from working at home will lead to it becoming a bigger part of our work life after the Covid-19 pandemic has abated.

We have all quickly proven that digital meetings and document/file sharing work just fine, and discovered that, without the time and energy demands of travel and commuting, we are able to use our time and resources more productively. Meanwhile, every time we look up, take a deep breath, or see a post showing how nature is recovering during the global lockdown, the environmental benefits of so many of us working from home are clear.

Smart Home Working is Microlink's initiative to bring our ergonomic and wellbeing acumen from the workplace into the home. We're here for the long term, so there's no escaping the need for the correct furniture and accessories to support your home workday.

As a manufacturer, Microlink's only brings products to market after conducting in-depth research, undertaking extensive development and testing, and ensuring that they comply fully with all relevant DSE regulations. All of our task chairs, for example, meet the current dimensional, ergonomic and strength guidelines, ensuring that you and your colleagues can benefit from ergonomically refined performance and comfort, at all times.

Home Working Survey

54%
State they feel less stressed since
working from home.

88%
Want to maintain their

What are we offering?

Ergonomic Solutions

It's tempting to think we can make do with improvised adaptations longer term at home or purchase inexpensive solutions from the 'high street' but invariably the products are not built to withstand the duration and comfort requirements of commercial office interiors. Employers also have a responsibility to source compliant computer equipment for home workers to help avoid discomfort and fatigue short term, and the potential for more serious musculoskeletal issues long term. Our products are brought to market after conducting in-depth research, undertaking extensive development and testing, and ensuring that they surpass the relevant DSE regulations.

All of our task chairs, for example, meet the most up to date dimensional, ergonomic and strength guidelines, ensuring that you and your colleagues can benefit from ergonomically refined performance and comfort, at all times and in all places.

Setting up your home space correctly is essential to aid concentration, enjoyment, and if you're to exploit the full potential of our Smart Home Working products.

We've provided choice on the breadth and depth of package options to reflect the kind of work your colleagues do at home and to support the possible need to have some flexibility if space is at a premium.

We also have a team of ergonomics specialists who can advise what's best for you or to help advise colleagues remotely should they need a bit of extra help once they're set up.

email: wpa@microlinkpc.com or call +44 (0)23 80240300

Uncompromised Ergonomic Support

With the recent rapid changes in working practises there's never been a more challenging and essential time to deploy ergonomics. Our support services are driven by a commitment to improving health and wellbeing of organisations and individuals working at home, which is why we've created these simple solutions to ensure everyone has access to the support and advice they need!

A Highly Experienced Team of Ergonomic Specialists Ready to Provide Support.

“It’s what you’re
using **not** where
you’re using it.”

Employers must protect their workers from the health risks of working with display screen equipment (DSE), such as PCs, laptops, tablets and smartphones.

The Health and Safety (Display Screen Equipment) Regulations apply to workers who use DSE daily, for an hour or more at a time – located anywhere at anytime.

If workers use display screen equipment (DSE) daily, as part of their normal work, continuously for an hour or more, employers must do a workstation assessment.

The law applies if users are, for example:

- At a fixed workstation.
- Mobile workers.
- Home workers.
- Hot-desking (workers should carry out a basic risk assessment if they change desks regularly).

Employers should look at:

- The whole workstation, including equipment, furniture, and work conditions.
- The job being done.
- Any special requirements of a member of staff, for example a user with a disability.

Employers must:

- DO a DSE workstation assessment.
- Reduce risks, including making sure workers take a break from DSE work or do something different.
- Provide an eye test if a worker asks for one.
- Provide training and information for workers.

Where there are risks, they should take steps to reduce them. Employers must also do an assessment when:

- A new workstation is set up.
- A new user starts work.
- A change is made to an existing workstation or the way it’s used.
- Users complain of pain or discomfort.

Incorrect use of DSE or poorly designed workstations or work environments can lead to pain in necks, shoulders, backs, arms, wrists and hands as well as fatigue and eye strain. The causes may not always be obvious.

Resolving specific muscular skeletal issues

It is widely recognised how vital for staff morale, productivity and wellness that health issues in the workplace are resolved quickly and efficiently. Work from home is not different

Unfortunately however, incumbent occupational health staff aren't always able to respond rapidly enough, especially when they're responsible for multiple sites and dealing with red tape and layers of assessors and suppliers, which can at times drag the resolution period out over several months. Working from home now makes this more complex and challenging for organizations to resolve.

Active Ergonomics has developed a quick and cost-effective way of resolving health issues in the workplace, changing the way in which alternative seating and equipment is sourced. Microlink can now transfer this ready made service to assist in resolving these issues directly in the home!

Through a combination of remote engagement, seating assessment forms, task chair adaptations or alternative equipment, and regional installation engineers and ergonomists, we are able to resolve most issues quickly and efficiently.

Do Chair Adaptions

Universal Lumbar Sleeve

This generous air-filled sleeve comes with a wide adjustable elastic strap to fit most task and meeting chairs for added lumbar support or even as a seat cushion.

Twice the size of integral lumbar pumps, the cushion encourages a more dynamic sitting posture and responds to the user's every move.

The Universal lumbar sleeve is easily deflated for use on the move, whether on public transport or in the car, and is available in breathable, adaptable, 3D black fabric as standard.

Universal Armpad

Retro-fittable elasticated gel arm pads for increased forearm comfort. Can also be used to increase the height of the armrests by 25mm.

Coccyx Cutout Cushions

The coccyx cut-out allows for extra support. The rear section of the seat has a portion removed to provide relief in the coccyx area.

Why Do?

We’ve nominated the ‘Do’ chair as our solution for home working as it’s not only light on its feet and easy to manoeuvre, it’s also incredibly comfortable. Its responsive mesh back and intuitive self-weighting mechanism have given it a global track record for fitting a wide variety of users, and it’s also easy to clean.

Do’s user-centred design means there aren’t a multitude of knobs and levers to find and struggle with, letting you concentrate on the job at hand (even if others in the house use your Do chair too).

*Certificated and Compliant to UK British Standard Fire Safety legal requirements for domestic furniture application.

Product Certification

Intertek Sustainability Clean Air Product Certification Clean Air certification provides proof that products have been independently tested and found to conform to VOC standards and to the ANSI/ BIFMA Furniture Emissions Standards.
BS5852 Part 2
Legal requirement for use in domestic furniture and fire safety regulations 1988 (& 1989,1993).
EN 1021 1 & 2
Fabrics tested to European standard for upholstery. Whilst EU countries should adopt EN1021 part 1 & 2 certificates some countries still adhere to their national standards.
BS EN 1335
Part 1 - Dimensions, determination of dimensions.
BS EN 1335-2 & 3:2009
Structurally suitable and sufficiently stable for use as an office task chair.

BS 5459 - 2 : 2000
Specification for Performance Requirements and Tests for Office Furniture.
BS EN ISO 9241-5:1999
Ergonomic requirements of office work with visual display terminals (VDT's)
Workstation layout and postural requirements. Part 5: Workstation layout and postural requirements.
BS 5459-2:2000+A2:2008
Structurally suitable and sufficiently stable for use as an office work chair.
ANSI / BIFMA X5.1:2011
Type 1 - Structurally suitable and sufficiently stable for General Purpose Office use.
C+M Certified
Complies with regs and is certified for domestic use.

Hacking the Home

A great ergonomic adage within the workplace is that, ‘the best seating position is the next one’. So before deciding on your new home-working set-up, check out the potential to have a variety of different ‘workstations’ around your home. Try to experiment, hack and improve on your set-up – for instance, by adding a cushion to improve lumbar support. Our Smart Home Working products are very refined, but nothing can beat taking a break from concentrated work now and then.

Using a stool at the kitchen island or counter is great when you’re taking calls, and means you’re more likely to maintain a more upright, balanced posture. Think about horse riders: having your knees below your hips in an open angle encourages the effortless adoption of a straighter back, and at the same time opens up your diaphragm and aids your digestive system (good for after breakfast or lunch). If you need to go free range and give yourself a break from sitting in one position for too long, even the ironing board can make a novel pop-up standing workstation for short bursts.

Tweak your environment to make yourself more alert by, for instance, adding a good task light, positioning yourself to benefit from natural light, introducing fresh air and getting the temperature right. Personalising your new workspace with plants, artefacts and a favourite picture, or positioning yourself so you have a nice view, will, the science suggests, not only increase your productivity but also make you happier.

Our Products

Laptop or Hybrid Tablet Riser and Remote Keyboard and Mouse

We’re using laptops more than ever and now it’s time to experience the benefits of raising the viewing position so the top of the screen is horizontal with your line of sight. We’ve all had times when we’ve thought that changing things is too much fuss, or we’ve felt that the equipment is too cumbersome, however as working at home becomes a more permanent solution it’s worth taking the time to get it right. These small changes will make a huge difference to your performance, wellbeing and energy at the computer, whether you’re typing, browsing or taking part in a video conference. The risk of poor posture is reduced, and you’re less likely to suffer from neck and shoulder pain, or even eye strain.

The Small Desk Raiser

Movement is key when working with computers and there’s increasing evidence that static sitting over sustained periods is bad for you. We evolved to move, and varying our posture keeps us more alert and fitter during the working day. Equally, standing all day isn’t great, so frequently mix it up with the desk raiser and you’ll feel healthier and more invigorated. Standing takes up less space and your reach is improved so if it’s shorter sessions you’re after, it’s ideal – and you can always pack it away if you need to use the table for something else at night or at the weekend.

Our Fast Ordering Process

We are investing considerably in the stock of components and accessories to support our stated lead time commitments and to buffer our supply chain capability. We aim to replenish our stocks in such time as to ensure a continuity of supply, however volume orders may leave supply depleted from time to time. Should we not be able to supply the requested item in time, we will seek to offer a suitable alternative.

Steps to receiving your Smart Home Working Package:

- 1. Select Do Task Chair Finish Colours and Fabrics (don't forget to consider the castor option).
- 2. Select Appropriate Accessory Package.
- 3. Add any "enhancement" products to your package selecting finish options where appropriate.

Smart Home Working order process:

- Day 1 Please email your order (pre 2pm) to our team wpa@microlinkpc.com
Please also include the full product details along with the full contact name, number and delivery address details.
Order processed by Microlink team.
- Day 2 Order packaged and prepared for shipment.
- Day 3 Order collected for shipment – you will be contacted by the freight forwarder to confirm the next day delivery status.
- Day 4 Order Delivered.

Ergotron desk Solutions

We're the sit-stand pioneers, and we continue to design innovative products that help improve employee health, comfort and productivity. Take your active workstyle on the move for a flexible, adjustable workstation that fits every space and every project.

Wherever you want to work with the WorkFit-C Single or Dual desks or the Teachwell desk. These computer stands double as adjustable sit-stand desks with a compact, mobile footprint that easily move throughout the home or office thanks to dual-wheel casters. Personalize your fit by tweaking the adjustment points as you work—no tools needed.

Neutral Posture

Properly position your display, mouse and keyboard.
 The result is less strain and fatigue and more energy...

This gets you into your "power zone." It minimizes stress to your body by naturally encouraging a posture that's comfortable and requires little energy expenditure, with your elbows close to your core, shoulders open and chin and forearms level with the floor.

Voluntary Motion

Incorporate movement into computing routine.

This relieves posture fatigue, it's like pushing the reset button...

Great for ergonomics and general wellness. Moving from one posture to the next—especially sitting to standing—helps prevent the cumulative hazards of poor posture and too much sitting while improving circulation, calorie-burn and insulin management.

Rest Time

Take brief and frequent breaks.

Standing up can be a recuperative posture after sitting a while...

This allows your body to rest and recuperate. But don't assume that rest means sitting! It's actually a break from whatever posture you've been holding. Taking breaks at regular intervals and adding occasional stretching is a great way to relax your eyes, wrists and body.

Terms & Conditions

The bit nobody reads:

Deliveries:

- The 3 working day lead time commences upon receipt of a clean PO received prior to 2pm on date of issue.
- Subject to quantities of 1-250 units only. Larger volume orders can be evaluated on application.
- Delivery date/time is subject to:
 - * Stock and part availability on receipt of clean PO.
 - * Third party freight availability and final delivery location.
 - * Deliveries are based on a [Mon-Friday](#) schedule. Weekend delivery is subject to price on application.
 - » Delivery applies to Mainland UK only (inclusive of Edinburgh, Glasgow, Stirling & Aberdeen) excluding Scottish Highlands where additional charges will apply.
 - » All non UK Mainland destination deliveries are subject to price on application / ability to deliver.
 - » Home deliveries where goods cannot be received / signed for, could be subject to additional re-delivery charges.
 - » Deliveries are to home address door only, and not inclusive of specific product placement or installation (unless quoted or stipulated).
 - » Packaging disposal is the responsibility of the recipient.
 - » Goods should be inspected on receipt of delivery. Damages should be reported within 24 hours (with images).
 - » Microlink / Orangebox reserve the right to alter delivery times in exceptional circumstances.

Product:

- Products will be supplied in accordance to the Home Working specifications detailed. In line with the Microlink / Orangebox policy of continual improvement, specification could vary if changes are implemented.
- In the event of any unforeseen stock availability, Microlink / Orangebox reserve the right to offer suitable alternative product solutions.
